NOZZLE CHART

A commonly used standard for nozzle size is the "nozzle number" which is equivalent to the nozzle capacity in GPM at a specific PSI. Spray angle does not effect nozzle volume.

BOLTED BALL VALVES

GREENLEAF Bolted Ball Valves are made with Stainless Steel bolts and precision molded polypropylene. The polypropylene is reinforced with fiberglass for additional strength. Self-aligning ball moves freely against the Teflon seats for smooth operation. The valve opens and closes with very little pressure on the handle. Ball is diamond turned, after molding to make it spherically perfect which provides precise contact between the ball and the seats. They come with Viton O-rings and Teflon self-lubricated stem bushings.

GREENLEAF - CAM COUPLERS

LOCKING CAM COUPLERS

GREENLEAF Locking Cam Couplers features an exclusive cam lever locking mechanism which helps reduce the possibility of the unintentional opening of the cam lever which could result in injury or costly spills. Parting lines have been removed from the sealing area of the male couplings reducing the possibility of leaks and wear to the rubber seals. The extended nipple length of the Locking Series B allows this coupling to be used in applications which would normally require an additional fitting in order to properly cam.

STANDARD INLET PLUMBING "RULES OF THUMB"

- Twice the plunger pump volume to be supplied to the pump.
- Inlet filtration oversized (2 - 3 times the pump volume) up to 5 times if hot water is pumped through the pump.
- Minimized suction line length.
- Smooth plumbing.
(no elbows or tees)
- Pressurized suction line
(Max 45 PSI) optimum conditions.
- All inlet plumbing to be at least 1 size larger than the inlet of the pump.
- Inlet to be flexible non-collapsible hose.
- Water inlet flow to enter on one side of the pump only.
- All connection must be airtight.
- If water is bypassed back into the inlet a regulator cannot use used.
- Bypass hose must be flexible hose, not wire braided pressure hose.
- Bypass loop can be longer and coiled to provide for more fluid flow for cooling.
- Bypass return leg to be reintroduced back to the inlet as to not induce excessive turbulence in the inlet of the pump.
- Inlet flow not to exceed .5 meters per second.
- Bottom port of unloader valves, should not be used if more that 40% of the unloader valves capacity is pushed through the valve (this value may vary from one valve to the next).
