

TECHNICAL SERVICE BULLETIN

Product Segment: Pratissoli

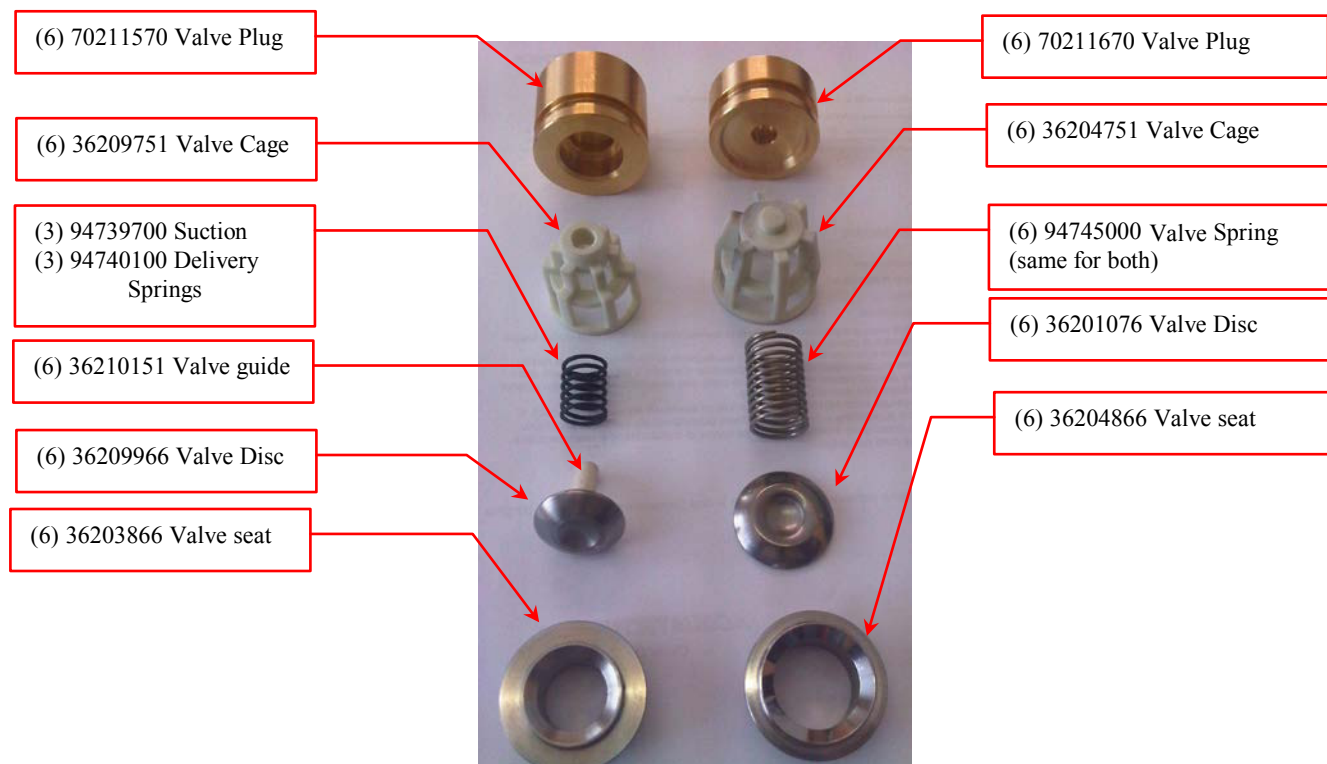

Subject:
KE30 to KE30H

Reference: TSB# 060112

Date: June 25 2012

This Technical Bulletin describes the recent changes to the KE (70 series) pumps. This is intended to improve the volumetric efficiency of the large flow rate versions of the 70 series pumps. Models affected by this change are KE28, KE30. With this change comes a new part number; these models are now known as KE28H, KE30H and a new model KE36H. The main feature of this change is the larger internal passages, allowing better fluid flow into, and out of the plunger chamber.

KE30 vs KE30H

Check Valve Repair Kits

(1) KIT2000IPR Suction
(1) KIT2001IPR Delivery
Valve kit
One of each kit is
required for one pump

(1) KIT2030IPR Valve KIT
One kit required for one pump

Note : Each repair kit contains enough parts to repair one complete pump, and included o-rings.

Converting / up dating

In order to convert or up date from one check valve type to the other the brass valve plug will also need to be changed. There is a total of 6 of the same valve plug used in one pump. The part number for the new one is illustrated above **(70211670)**. These assemblies are interchangeable with between the KE30 and the KE30H.
