

Versatile, Reliable Pumps for a Wide Range of Applications

- Pumps the full spectrum of low-to-high viscosity fluids.
- Features a seal-less design and horizontal disk check valves that enable the pump to handle abrasives and particulates that might damage or destroy other types of pumps.
- Simple, compact design reduces initial investment and lowers maintenance costs.
- Operational efficiencies reduce energy costs.
- Able to run dry without damage (or additional maintenance) to the pump in case of accident or operator error.
- Tolerates non-ideal operating conditions.
- Minimizes maintenance and downtime because there are no mechanical seals, packing or cups to leak or replace.

D35 Series

Maximum Flow Rate: 36.5 gpm (138 l/min) Maximum Pressure: 1500 psi (103 bar) for Metallic Pump Heads

D35 with Brass pump head

D35 Series Performance

Flow				
Max. Input		Max. Flow @ 1200 psi (83 bar)		
Model	rpm	gpm	l/min	
D35-X	1050	36.5	138	
D35-E	1150	34.0	129	
		@ 1500 psi (103 bar)		
D35-X	700	23.1	87.5	

Capacities

Pressure

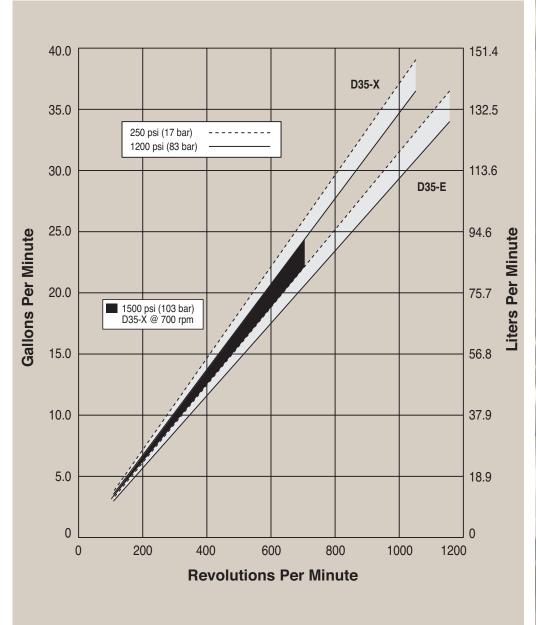

Maximum Inlet Pressure

250 psi (17 bar) with 1500 psi (103 bar) maximum discharge pressure 500 psi (34 bar) with 1200 psi (83 bar) maximum discharge pressure

Maximum Discharge Pressure

1200 psi (83 bar) @ 1150 rpm max. 1500 psi (103 bar) @ 700 rpm max.

Performance and specification ratings apply to D35 configurations unless specifically noted otherwise.

Maximum Flow at Designated Pressure

Calculating Required Power

100 x rpm 63,000	+	=	electric motor hp
100 x rpm 84,428	+ $\frac{l/\min x bar}{5 l }$	=	electric motor kW

When using a variable frequency controller (VFD) calculate the hp or kW at minimum and maximum pump speed to ensure the correct hp or kW motor is selected. Note that motor manufacturers typically de-rate the service factor to 1.0 when operating with a VFD.

Net Positive Suction Head (NPSHr)

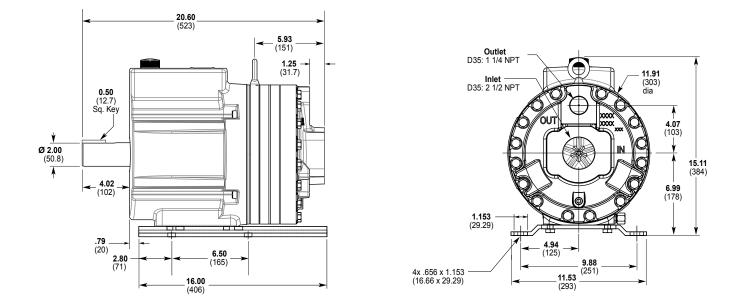

Note: Positive inlet pressure required with PTFE diaphragms.

Self-priming:

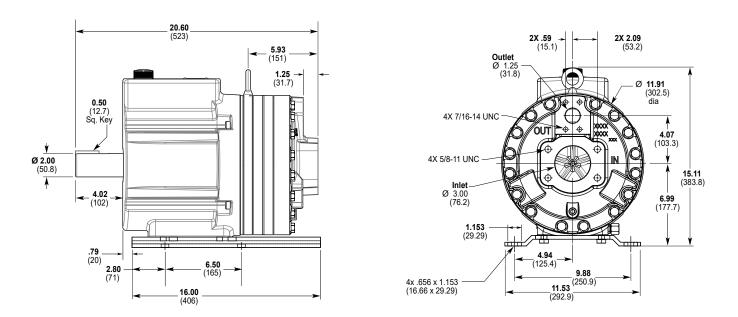

Each Hydra-Cell pump has different lift capability depending on model size, cam angle, speed, and fluid characteristics. To ensure that your specific lift characteristics are met, refer to the inlet calculations regarding friction, and acceleration head losses in your Hydra-Cell Installation & Service Manual. Compare those calculations to the NPSHr curves above.

D35 Series Representative Drawings

D35 Models with NPT Inlet/Outlet Ports Inches (mm)

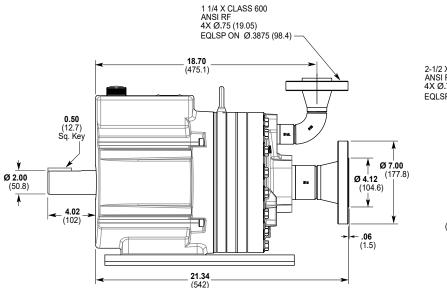

D35 Models with SAE Flange Inlet/Outlet Ports Inches (mm)

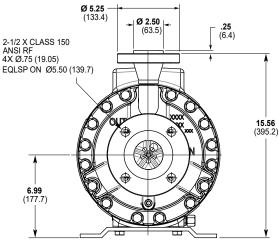

Note: Contact factory for additional drawings of specific models and configurations.

D35 Series Representative Drawings/Valves/Skids

D35 Models with ANSI Flange Inlet/Outlet Ports Inches (mm)

Note: Contact factory for additional drawings of specific models and configurations.

Valve Selection

A seal-less C64 Pressure Regulating Valve is recommended for Hydra-Cell D35 pumping systems, especially for highpressure requirements or when handling dirty fluids.

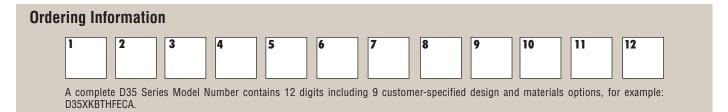

A C24 Pressure Regulating Valve provides a capable, lower-cost alternative to C63 valves for Hydra-Cell D35 pumping systems.

For complete specifications and ordering information, consult the Hydra-Cell Master Catalog.

D35 Series How to Order

Digit	Order Code	Description	Digit	Order Code	Description	
1-3		Pump Configuration	10		Valve Springs
